In June 2002 we installed ICECOLD in our Trane HVAC roof top package units (1 thru 16A) a total of 17 units at our main warehouse facility in Ft. Worth TX. Prior to installation of ICECOLD we were frequently replacing compressors annually, per unit. However, since installing ICECOLD the need to replace compressors has been greatly reduced, and maintenance cost have been significantly reduced also. The ICECOLD saves on the life of compressors, run hours, plus additional savings on power usage per unit.

We kept track of the run hrs. of AC unit 16, (7 1/2 ton Trane package unit) recording run hrs. and amp. draw before and after introducing ICECOLD. Also recorded S/A (supply air) and R/A (return air) vent temperatures. It showed a reduction in amp draw of 10% and a 2 degree F improvement in S/A (supply air) temperature. We should have reduced our cost by at least 18% on AC units as a result of ICECOLD.

Thank you: Dennis Davis
