Mitch, Ben, and Nandu:

On behalf of Unibright Foods, Inc., I want to express sincere appreciation for your team's efforts in introducing IceCOLD® green technology to the ammonia refrigeration systems in our meat plant facilities.

In addition to increasing the efficiency of our ammonia refrigeration equipment, the use of IceCOLD® technology has significantly improved the efficiency of our office air conditioning systems and reefer trucks. We have amassed substantial savings in costs, with a greater than 17.50% reduction in use of power units (KWHs) and fuel when compared to normal electrical consumption as measured by data loggers. This information was based on pre- and post-IceCOLD® installation data presented in a final report prepared and reviewed by an independent organization. We truly appreciated how thorough and professional Eco Air Tech was in handling the project.

With recent increases in general electricity costs, energy savings have become a more important priority, and we have tremendously benefited from incorporating IceCOLD® green technology into our refrigeration and air conditioning systems.

I hope this letter will encourage other companies and organizations to strongly consider utilizing and taking advantage of IceCOLD® green technology as our company has and will continue to do.

Thank you.

President/CEO
